CIRCULAR SAWS. With Movable or Inserted Teeth WE CLAIM for our Patented Circular Saw the following advantages over

Saw the following advantages over all others:

The shanks of the teeth are elastic, and exert a uniform distinsion in the sockets.

The stability of the plate is in no way affected by inserting new sets of teeth.

Each tooth, independently, may be adjusted to the cutting line.

No rivets, keys, or other objectionable appliances, are employed in connection with the teeth, which are as simple to construction, and as easily used, as a nut for a bolt.

In short, all the difficulties heretofore experienced in the use of movable teeth for saws, are fully met and obviated by this invention.
